1ST JANUARY 2009

Next Generation Sunbrella®

Sunbrella Marine & Awning 'next generation' fabric has increased its water repellency by 25%, while maintaining the same breathability, it also features enhanced quality and greater strength. This has been achieved with no loss to Sunbrella's legendary fade resistance and ease of cleaning. Glen Raven has developed fiber formation enhancements, material improvements, in yarn, weaving and finishing. The beginning started with a proprietary polymer chemistry for the fibers used. Increased production efficiencies have led to a substantial reduction of pin hole visibility.

Sunbrella have been able to achieve these performance achievements, due to its vertically integrated manufacturing process, which has allowed it to enhance every step of the production process, to new levels of performance, that were previously thought to be unachievable.

These considerable enhancements were put into production some nine months ago and the announcement delayed until it was felt the old production was no longer available.

Sunbrella® – 203cm

Sunbrella Marine & Awning current colour range;

Black 80008 / Captain Navy 80046 / Cadet Grey 80030
